PROFESSIONAL SUMMARY

Software Engineering graduate (B.Sc., 2026) seeking a Tier 1 SOC Analyst role in security operations and threat detection. Hands-on experience deploying and tuning a Wazuh SIEM, building centralized log-collection pipelines, and operating a network honeypot to capture and analyze real intrusion attempts. Practiced in security event monitoring, log analysis, event correlation, alert triage, and detection rule tuning across Linux servers and network infrastructure, with Python and Bash automation for repetitive security operations tasks. Bilingual (Arabic native, English professional) and available for 24/7 rotating shift coverage.

TECHNICAL SKILLS

SIEM & Security Monitoring: Wazuh SIEM, security event monitoring, log analysis, log collection pipelines, event correlation, detection rule tuning, false positive reduction, alert triage, dashboards and reporting

Incident Detection & Response: Security alert triage and escalation, incident documentation, indicators of compromise (IOC) identification, MITRE ATT&CK framework, Cyber Kill Chain, intrusion detection, honeypot analysis, threat hunting fundamentals

Networking: TCP/IP, DNS, HTTP/HTTPS, SSH, network traffic analysis, packet capture, network security, firewall and IDS/IPS concepts, port scanning and enumeration

Operating Systems: Linux administration and hardening (Ubuntu, Debian, Kali Linux, Parrot OS, Manjaro), syslog, systemd, Linux server setup and troubleshooting

Identity & Access Management: Keycloak, authentication and authorization workflows, access control, user provisioning, privilege review

Scripting & Automation: Python, Bash shell scripting, regular expressions (regex), log parsing, REST API integration, security task automation

Platforms & Tools: Apache Kafka, Git and GitHub, Odoo ERP, virtualization and lab environments, Linux command line

Soft Skills: Incident escalation and handover, technical documentation, cross-team collaboration, analytical problem solving, shift-based work, English and Arabic communication

PROFESSIONAL EXPERIENCE

Junior Software Developer Intern

[COMPANY NAME] — Ankara, Turkey — Sep 2025 – Jul 2026

- Administered and troubleshot Linux servers in a production environment, investigating system and service logs to identify the root cause of availability and configuration issues.
- Supported authentication and access-management workflows, including user access configuration and permission reviews across internal systems.
- Maintained and integrated Odoo-based backend systems, working with APIs and internal services to keep business-critical workflows running.
- Executed deployment and configuration tasks on Linux infrastructure, documenting procedures so they could be repeated reliably by the team.
- Collaborated with developers and infrastructure staff to diagnose incidents and improve system reliability and operational workflows.

SECURITY PROJECTS

Wazuh SIEM Deployment — Home Security Lab

Technologies: Wazuh, Linux, log collection, event correlation, detection rules

- Deployed an open-source Wazuh SIEM to centralize log collection and provide unified visibility over hosts and network events.
- Built the log-collection layer and configured agents to forward system, authentication, and application logs into the platform.
- Wrote and tuned correlation and detection rules to convert raw log noise into actionable security alerts, reducing false positives during triage.

Network Honeypot — Deception and Intrusion Analysis

Technologies: Honeypot, Linux, intrusion detection, log analysis, network security

- Deployed a honeypot inside a controlled network segment to attract and record real intrusion attempts.
- Analyzed captured attacker activity — scanning, brute-force login attempts, and post-access behavior — to extract indicators of compromise and early-warning signals.
- Used the captured data as a safe lab for studying adversary tradecraft and validating detection logic.

Kafka Log Pipeline — Detection Data Engineering (In Progress)

Technologies: Apache Kafka, Python, Linux, log ingestion, real-time processing

- Building a centralized log-processing pipeline on Apache Kafka for scalable, real-time ingestion of security events.
- Designing topic structure for log organization and automating event processing to shorten the time between event generation and analyst visibility.

EDUCATION

Bachelor of Science (B.Sc.), Software Engineering

Ostim Technical University — Ankara, Turkey — Sep 2022 - Jul 2026

- Coursework focus: cybersecurity, security operations, computer networks, operating systems, and software development.

LANGUAGES

Arabic — Native | English — Professional working proficiency

ADDITIONAL INFORMATION

Available for 24/7 rotating shift work. Open to relocation across the UAE and GCC, and to roles in Turkey or remote. Work authorization: [STATE YOUR STATUS — e.g. UAE citizen / Turkish work permit / requires sponsorship].
