PROFESSIONAL SUMMARY

Software Engineering graduate (B.Sc., 2026) with a year of experience maintaining and integrating Odoo-based backend systems at Ostim Technical University's Digitalization Department, working with REST APIs, internal services and Keycloak authentication on Linux infrastructure. Builds with Python, Bash, Git/GitHub and Apache Kafka, and brings a security-minded, well-documented approach to backend development.

SKILLS

Backend, ERP & Integration: Odoo ERP, Odoo module customization, Odoo XML views and QWeb templates, PostgreSQL, REST APIs, API integration, Apache Kafka, Backend services, Git, GitHub

Identity & Access Management: Keycloak, Single sign-on (SSO), Authentication and authorization, Access control, User provisioning, Permission reviews

Operating Systems & Administration: Linux administration, Linux hardening, Ubuntu, Debian, Kali Linux, Parrot OS, Manjaro, systemd, syslog, Server setup and troubleshooting, Deployment and configuration, Virtualization and lab environments

Professional Skills: Root cause analysis, Technical documentation, Incident escalation and handover, Cross-team collaboration, Analytical problem solving, Shift-based work, English and Arabic communication

Programming & Scripting: Python, Bash shell scripting, Regular expressions (regex), Log parsing, Automation scripting

Networking: TCP/IP, DNS, HTTP/HTTPS, SSH, Network troubleshooting, Network traffic analysis, Packet capture, Firewall and IDS/IPS concepts, Port scanning and enumeration

SIEM & Security Monitoring: Wazuh SIEM, Security event monitoring, Log analysis, Log collection pipelines, Event correlation, Detection rule tuning, False positive reduction, Alert triage, Dashboards and reporting

Incident Detection & Response: Alert triage and escalation, Incident documentation, Indicators of compromise (IOC), MITRE ATT&CK, Cyber Kill Chain, Intrusion detection, Honeypot analysis, Threat hunting fundamentals

PROFESSIONAL EXPERIENCE

Junior Software Developer Intern

Ostim Technical University, IT Office (Digitalization Department) | Ankara, Turkey | Sep 2025 - Jul 2026

Certified experience - experience certificate issued by the university's IT office

- Administered and troubleshot Linux servers in a production environment, investigating system and service logs to identify the root cause of availability and configuration issues.
- Maintained and integrated Odoo-based backend systems, working with REST APIs and internal services to keep business-critical workflows running.
- Supported authentication and access-management workflows with Keycloak, including user access configuration and permission reviews across internal systems.
- Executed deployment and configuration tasks on Linux infrastructure, documenting procedures so they could be repeated reliably by the team.
- Collaborated with developers and infrastructure staff to diagnose incidents and improve system reliability and operational workflows.

PROJECTS

Kafka Log Pipeline - Real-Time Event Processing (In Progress)

Technologies: Apache Kafka, Python, Linux, log ingestion, real-time processing

- Building a centralized log-processing pipeline on Apache Kafka for scalable, real-time ingestion of events.
- Designing the topic structure and automating event processing in Python to shorten the time from event generation to visibility.

Wazuh SIEM Deployment - Home Security Lab

Technologies: Wazuh, Linux, log collection, event correlation, detection rules

- Deployed an open-source Wazuh SIEM to centralize log collection and provide unified visibility over hosts and network events.
- Configured agents to forward system, authentication and application logs into the platform.
- Wrote and tuned correlation and detection rules to turn raw log noise into actionable alerts, reducing false positives during triage.

Network Honeypot - Deception and Intrusion Analysis

Technologies: Honeypot, Linux, intrusion detection, log analysis, network security

- Deployed a honeypot inside a controlled network segment to attract and record real intrusion attempts.
- Analyzed captured activity (scanning, brute-force logins, post-access behavior) to extract indicators of compromise.
- Used the captured data as a safe lab for studying attacker techniques and validating detection logic.

EDUCATION

Bachelor of Science (B.Sc.), Software Engineering

Ostim Technical University | Ankara, Turkey | Sep 2022 - Jul 2026

Relevant coursework: software development, computer networks, operating systems, cybersecurity, security operations.

LANGUAGES

Arabic - Native | English - Professional working proficiency

ADDITIONAL INFORMATION

- Work authorization: requires visa sponsorship for UAE/GCC roles; family based in Abu Dhabi; available to start immediately.
