

Ayman Mohamed Zakieldin Bilal

Blue Team / Security Engineer • Software Engineering Graduate

✉ aymanmomdd@gmail.com ☎ +90 505 773 7807 🌐 github.com/aaa1117

📍 Abu Dhabi, UAE • Ankara, Turkey

SUMMARY

Software Engineering graduate building a career in blue-team security engineering. I turn noisy, raw logs into clear signal — designing SIEM pipelines, tuning detections, and standing up the infrastructure that keeps a network observable and defensible. Comfortable working close to the metal: Linux administration, log-collection pipelines, authentication and access control, and automating the repetitive parts of security operations with Python and Bash. Currently deepening work on scalable log ingestion with Apache Kafka and hands-on threat detection.

SKILLS

// security

SIEM Architecture Log Analysis
Threat Detection Honeypot Development
Authentication & Access Control
Security Monitoring

// programming

Python Bash Scripting
Regular Expressions API Integration

// tools & platforms

Kali Linux Parrot OS Manjaro
Apache Kafka Keycloak Odoo
Server Setup

// networking & systems

Linux Administration SSH TCP/IP
Log Collection Pipelines

EXPERIENCE

Junior Software Developer Intern

09/2025 – 07/2026

Ankara, Turkey

- Assisted in Linux server administration and infrastructure troubleshooting.
- Worked with Odoo-based systems and backend integrations.
- Supported authentication and access-management workflows.
- Participated in technical problem-solving and deployment tasks.
- Collaborated with development teams to improve system functionality and operational workflows.
- Gained hands-on experience with infrastructure management, networking, and system support.

PROJECTS

SIEM System — open-source SIEM for centralized log monitoring and security-event analysis; built the log-collection layer and worked through event correlation to improve visibility and threat detection across network infrastructure.

Network Honeypot — honeypot deployed inside the network to lure and observe attackers, turning intrusion attempts into early-warning signal and a safe lab for studying real adversary behavior.

Kafka Log Pipeline in progress — centralized log-processing pipeline on Apache Kafka for scalable ingestion, real-time event visibility, and automation of security-event processing.

EDUCATION

B.Sc. Software Engineering

09/2022 – 07/2026

Ostim Technical University · Ankara, Turkey

► Focused on cybersecurity and security operations.
